

How about a free library?

I have just been given a library containing twenty nine thousand five hundred books. I now have twenty nine thousand four hundred and ninety five left to read. And I got this all for free. How do I store so many books? The library is from the Project Gutenberg and is contained on a single, double layer DVD that holds 8.7 GB of information. The books on the DVD are free of copyright, so are able to be scanned, compiled and given away on disc. My latest version arrived from the Project (USA based) five days from ordering. The books can be downloaded (8.7 GB though) from <http://goo.gl/RMji>, but I would recommend ordering the free, post free DVD because of the need to have access to high speed broadband to have any chance of a successful download.

What I have described above is but one example of what are known as electronic books (ebooks for short). If you want a better feel for ebooks go to the Wikipedia ebook entry at <http://goo.gl/Wjdyn>. The site gives good explanations and overview of the advantages and disadvantages of ebooks, and other sources for downloading them. There is comment on (the now fashionable) electronic ebook readers.

Wikipedia is only one aspect of the Wiki world. Wiki Books at <http://goo.gl/AXdV> is interesting in that you can edit open-content textbooks collection.

A good source of free downloadable ebooks is our friend Google. Just go to Google Books at <http://goo.gl/97MCq> and you have the book world at your fingertips. Books are available in full and preview formats. Just click on the subject you are interested in and select either full view (in the left margin) if you want only the full version. Not all the books are free but you are told which are which at that stage. There is a reasonable selection of New Zealand books and magazines on the site.

I mentioned ebook readers above. There are a number of free ebook readers that you can use on your PC. Nook for PC, that can be downloaded from <http://goo.gl/fnFr>, is the one I use. Just load your ebook into Nook and start reading. The Nook reader is provided by Barnes & Noble. They do provide some free ebooks.

If you want a New Zealand site with free books and historical documents go to the New Zealand Electronic Text Centre located at <http://goo.gl/9gfvU> and maintained by the Victoria University Library. In their words "Here you can search and browse an open digital library of New Zealand and Pacific Island documentary heritage material as well as new born-digital work and research from Victoria University. The collection contains over 1400 texts and will continue to grow through projects to support teaching, learning and research at the university."

The site Makeuseof.com at <http://goo.gl/8VAD> has a list of what they describe as "The Best 6 Sites to Get Free Ebooks." The comments, by readers, at the bottom of this page provide some other useful sites. Also on Makeuseof.com at <http://goo.gl/wPTs> are twenty seven very good downloadable ebook "guides" The guides include such subjects as digital photography, productivity, Internet searching, Twitter, Gmail, Windows 7 Guide and how to prepare professional Word documents.

“Millions of documents and books at your fingertips with Scribd” at <http://goo.gl/1PBC> . At Scribd you can read, print, download or upload your PDF, Word, and PowerPoint docs to share them with the world's largest community of readers according to Scribd.

A final word – check the download size before downloading ebooks.
